

# Creación de middleware

Desarrollo backend -  
Laravel 8

# Crear un middleware para validar rol

- php artisan make:middleware RolValido
- Dentro del método handle

```
if (Auth::check() && auth()->user()->rol == 'admin') {  
    return $next($request);  
} else {  
    Auth::logout();  
    Session::flush();  
    return redirect()->route('login');  
}
```

# Agregamos al kernel

- `app/http/Kernel.php`
- `'RolValido' => \App\Http\Middleware\CheckUserRole::class,`

# Modo de utilizarlo

```
public function __construct() {  
    $this->middleware(['guest'])->only(['index']);  
    $this->middleware(['auth', 'RolValido'])->only(['mostrar']);  
}
```

# Middleware para no tener cache

```
$response = $next($request);  
  
    return $response  
  
    ->header('Cache-Control', 'nocache, no-store, max-age=0, must-revalidate')  
  
    ->header('Pragma', 'no-cache')  
  
    ->header('Expires', 'Fri, 01 Jan 1990 00:00:00 GMT');
```
